Dawn Theme - Recently Viewed Products

Installation

The section can be installed and activated by adding a new section in the product template, search for Recently viewed products.

The section name is set as Recently Viewed Products

Customization

Section Settings

Full width option

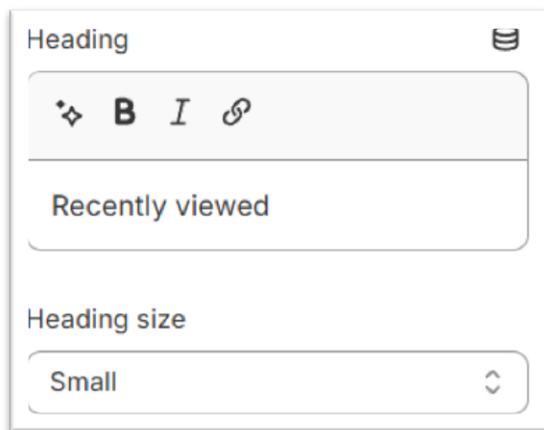

There is a checkbox to enable the section as full width, by default the section is unchecked and set with the template width.

☐ Enable full width

Checking this checkbox will make the section full width

Heading

The text for the heading for the section can be customized by adding the required text in the rich text field. The heading can also include dynamic contents like product title. This can be enabled by clicking on the  icon.

Heading 

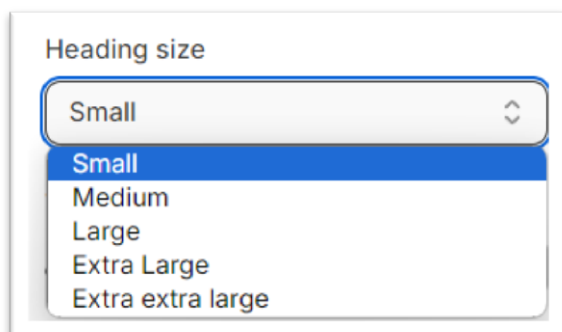

Recently viewed

Heading size

Small 

The size of the header can also be customized by selecting the required size for the Heading size dropdown, by default it is set to Small, the available sizes is as follows

Heading size

Small 

Small

Medium

Large

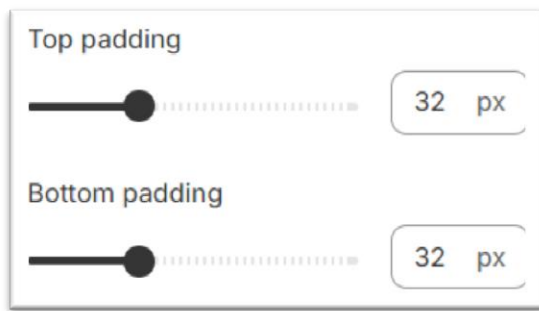

Extra Large

Extra extra large

Note: The header will display only if the section is active.

Section padding

The top and bottom padding of the section can be adjusted by selecting the appropriate value using the range sliders.

A UI control for section padding. It contains two sliders. The top slider is labeled 'Top padding' and has a value of 32 px. The bottom slider is labeled 'Bottom padding' and also has a value of 32 px. Each slider consists of a horizontal line with a black circular handle and a numerical value in a rounded box to its right.

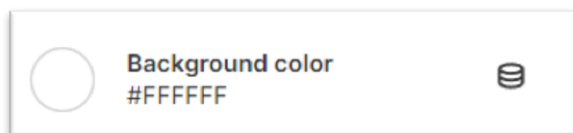

Top padding

32 px

Bottom padding

32 px

Section background

A UI control for section background color. It features a white circular color picker on the left, the text 'Background color #FFFFFF' in the center, and a circular icon with horizontal lines on the right.

Background color
#FFFFFF

The background for the entire section can be assigned using this color picker, this can also pick dynamic color values like brand primary color using the  icon.

Product card settings

Grid gap

The gap between the product cards can be customised from 0px to 50px using the Gap selection slider

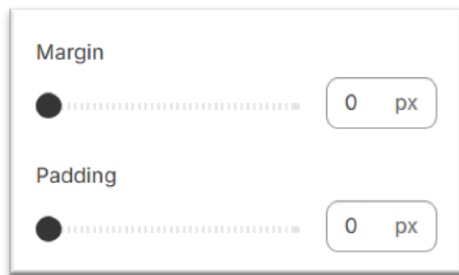

A UI control for grid gap. It features a slider labeled 'Gap between items (grid)' with a value of 10 px. The slider has a horizontal line with a black circular handle and a numerical value in a rounded box to its right.

Gap between items (grid)

10 px

Margin and Padding

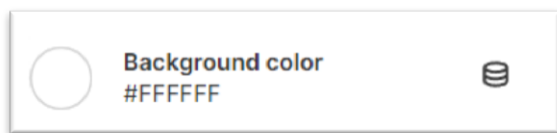

In order to maintain the uniformity of the product cards, the margin and padding are kept uniform, the value for the margin and padding can be selected using the respective selection sliders.

The image shows two sliders for 'Margin' and 'Padding'. Each slider has a circular handle on the left and a numerical input field on the right. The 'Margin' slider's input field shows '0' and 'px'. The 'Padding' slider's input field also shows '0' and 'px'.

Note: it is recommended to use either the Gap or Margin as virtually they act almost the same, hence the margin value is by default set to 0px

Product card background

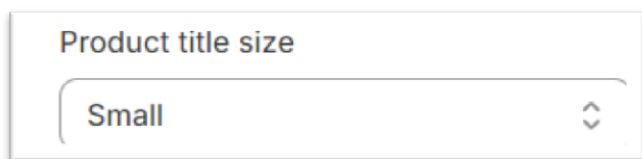

The image shows a background color picker. It includes a circular color swatch on the left, the text 'Background color' and '#FFFFFF' in the center, and a 'Brand' icon (a circle with horizontal lines) on the right.

The background for the individual product cards can be assigned using this color picker, this can also pick dynamic color values like brand primary color using the  icon.

Product title size

The size of the product titles can also be customized by selecting the required size for the Product title size dropdown, by default it is set to Medium, the available sizes *Small, Medium, Large, Extra Large*.

The image shows a dropdown menu for 'Product title size'. The dropdown is open, showing the word 'Small' as the selected option. A small upward and downward arrow icon is visible on the right side of the dropdown.

Button style

The style of the button can be customised by selecting either the primary or secondary button style option. This will make the button get the style of the primary/secondary button style set in the theme.

The image shows a button style selector. It has the title 'Button Style' and two buttons: 'Primary' and 'Secondary'. The 'Primary' button is highlighted with a light blue background, while the 'Secondary' button has a light grey background.

Card hover effect

A small hover effect is added to card, that if enabled, on hover the product cards which are not hover will have a black and white effect, where the hovered product will have color. This is disabled as default.

☐ Enable hover effect
